135. A search of MedLine and EmBase electronic databases was conducted on July 15, 1993 using the keywords set "doxorubicin/liposome/human." 128 unique citation were identified using this strategy. Upon review, 16 of these were found to contain safety and other information on patients administered liposomal doxorubicin. Seven abstracts relating to these publications were subsequently identified. Six additional publications were identified following a review of clinical articles appearing after this search was completed and before June 1, 1994. It was not possible to obtain a translation of the one Japanese language article by Mizuno et al, 1991.
