Precautions in the Handling of Epidural Catheters

Key points for safe use

(Case) When an epidural catheter for pain control was removed, the tip of the catheter was torn off and left in the patient body.

1 Precautions when handling epidural catheters

Epidural catheters which were damaged during insertion may be sheared or torn when the catheter was removed.
Mechanism of catheter damage (1)

1. Forceful catheter insertion
   - Do not insert a catheter forcibly if resistance is felt. The catheter may be damaged by the epidural needle.

2. Kinked catheter

3. Catheter damaged by the edge!

Catheter damage

Photo by Hakko Co., Ltd.
Do not forcibly pull a catheter back during insertion. The catheter may be damaged by the epidural needle.

Mechanism of catheter damage (2)

1. Forceful catheter withdrawal

2. Catheter damaged by the heel!
A smooth cut made by the epidural needle can be seen on the damaged catheter as shown in the above photograph. Catheters may be torn from the damaged area and completely sheared during removal.
