<td><strong>Important Precautions</strong>&lt;br&gt;Impulse-control disorder such as pathological gambling (persistent and recurrent gambling behavior despite negative social consequences including ruined personal life), pathologically increased sexual urges, compulsive shopping, and binge eating have been reported in patients receiving levodopa or a dopamine receptor agonist. Reducing the dose or discontinuing the medicine, or other appropriate measures should be taken if such symptoms develop. In addition, patients, their families, or other caregivers should be informed of these symptoms of impulse-control disorder.</td>
<td><strong>Important Precautions</strong>&lt;br&gt;Impulse-control disorder such as pathological gambling (persistent and recurrent gambling behavior despite negative social consequences including ruined personal life), pathologically increased sexual urges, compulsive shopping, and binge eating have been reported in patients receiving levodopa or a dopamine receptor agonist. In addition to impulse-control disorder, dopamine dysregulation syndrome in which patients seek doses of levodopa in excess of those required also has been reported in patients receiving levodopa. Patients, their families, or other caregivers should be informed of these symptoms and reducing the dose or discontinuing the medicine, or other appropriate measures should be taken if such symptoms develop.</td>
