

## 1 **Temozolomide for Injection**

2 注射用テモゾロミド

3

4 Temozolomide for Injection is a preparation for in-  
5 jection which is dissolved before use.

6 It contains not less than 95.0% and not more than  
7 105.0% of the labeled amount of temozolomide  
8 ( $C_6H_6N_6O_2$ : 194.15).

9 **Method of preparation** Prepare as directed under Injec-  
10 tions, with Temozolomide.

11 **Description** Temozolomide for Injection occurs as a  
12 white to pale red or light yellow-brown powder.

13 **Identification** Perform the test with 75  $\mu$ L each of the  
14 sample solution and standard solution obtained in the Assay  
15 as directed under Liquid Chromatography <2.01> according  
16 to the following conditions: the retention times of the prin-  
17 cipal peaks in the chromatograms obtained from these solu-  
18 tions are the same, and the absorption spectra of these peaks  
19 exhibit similar intensities of absorption at the same wave-  
20 lengths.

21 *Operating conditions—*

22 Column, column temperature, mobile phase and flow  
23 rate: Proceed as directed in the operating conditions in the  
24 Assay under Temozolomide.

25 Detector: A photodiode array detector (wavelength: 270  
26 nm, spectrum range of spectrum: 210 – 400 nm).

27 *System suitability—*

28 System performance: Proceed as directed in the system  
29 suitability in the Assay.

30 **pH** Being specified separately when the drug is granted  
31 approval based on the Law.

32 **Purity** Related substances—Use the sample solution ob-  
33 tained in the Assay as the sample solution. Pipet 1 mL of  
34 the sample solution, add the mobile phase to make exactly  
35 100 mL, and use this solution as the standard solution. Per-  
36 form the test with exactly 75  $\mu$ L each of the sample solution  
37 and standard solution as directed under Liquid Chromatog-  
38 raphy <2.01> according to the following conditions, and  
39 determine each peak area by the automatic integration  
40 method: the peak area of the related substance E, having the  
41 relative retention time of about 0.4 to temozolomide, ob-  
42 tained from the sample solution is not larger than 2/5 times  
43 the peak area of temozolomide from the standard solution,  
44 the peak area of the related substance IA, having the relative  
45 retention time of about 1.4, from the sample solution is not  
46 larger than the peak area of temozolomide from the standard  
47 solution, and the area of the peak other than temozolomide  
48 and the peaks mentioned above from the sample solution is  
49 not larger than 1/5 times the peak area of temozolomide

50 from the standard solution. Furthermore, the total area of  
51 the peaks other than temozolomide from the sample solution  
52 is not larger than the peak area of temozolomide from the  
53 standard solution. For the peak areas of the related sub-  
54 stances E and IA, multiply the relative response factors,  
55 0.63 and 0.29, respectively.

56 *Operating conditions—*

57 Detector, column, column temperature, mobile phase and  
58 flow rate: Proceed as directed in the operating conditions in  
59 the Assay under Temozolomide.

60 Time span of measurement: About 3 times as long as the  
61 retention time of temozolomide.

62 *System suitability—*

63 System performance: Proceed as directed in the system  
64 suitability in the Assay.

65 Test for required detectability: Pipet 5 mL of the standard  
66 solution obtained in the Assay, and add the mobile phase to  
67 make exactly 200 mL. Pipet 2 mL of this solution, and add  
68 the mobile phase to make exactly 100 mL. When the pro-  
69 cedure is run with 75  $\mu$ L of this solution under the above  
70 operating conditions, the SN ratio of the peak of te-  
71 mozolomide is not less than 10.

72 System repeatability: When the test is repeated 6 times  
73 with 75  $\mu$ L of the standard solution under the above operat-  
74 ing conditions, the relative standard deviation of the peak  
75 area of temozolomide is not more than 2.0%.

76 **Water** <2.48> To an amount of Temozolomide for Injec-  
77 tion, equivalent to 100 mg of Temozolomide, add exactly  
78 40 mL of methanol, dissolve the content, pipet 2 mL of the  
79 solution, and perform the test by coulometric titration: not  
80 more than 1.0%. Perform a blank determination in the same  
81 manner, and make any necessary correction.

82 **Bacterial endotoxins** <4.01> Less than 0.75 EU/mg.

83 **Uniformity of dosage units** <6.02> It meets the require-  
84 ment of the Mass variation test (*T*: being specified sepa-  
85 rately when the drug is granted approval based on the  
86 Law.).

87 **Foreign insoluble matter** <6.06> Perform the test ac-  
88 cording to Method 2: it meets the requirement.

89 **Insoluble particulate matter** <6.07> It meets the re-  
90 quirement.

91 **Sterility** <4.06> Perform the test according to the Mem-  
92 brane filtration method: it meets the requirement.

93 **Assay** Take a number of Temozolomide for Injection,  
94 equivalent to 500 mg of temozolomide ( $C_6H_6N_6O_2$ ), dis-  
95 solve each content in water, wash each container with water,  
96 combine the washings with the former solution, and add  
97 water to the combined solution to make exactly *V* mL so  
98 that each mL contains about 2.5 mg of Temozolomide. Pi-

pet 5 mL of this solution, add the mobile phase to make exactly 100 mL, and use this solution as the sample solution. Separately, weigh accurately about 31 mg of Temozolomide RS, and add the mobile phase to make exactly 50 mL. Pipet 10 mL of this solution, add the mobile phase to make exactly 50 mL, and use this solution as the standard solution. Perform the test with exactly 75  $\mu$ L each of the sample solution and standard solution as directed under Liquid Chromatography <2.01> according to the following conditions, and determine the peak areas,  $A_T$  and  $A_S$ , of temozolomide in each solution.

$$\begin{aligned} &\text{Amount (mg) of temozolomide (C}_6\text{H}_6\text{N}_6\text{O}_2\text{)} \\ &= M_S \times A_T / A_S \times 16 \end{aligned}$$

$M_S$ : Amount (mg) of Temozolomide RS taken

*Operating conditions—*

Proceed as directed in the operating conditions in the Assay under Temozolomide.

*System suitability—*

System performance: To 1 mg of temozolomide add a mixture of the mobile phase and 0.1 mol/L hydrochloric acid TS (1:1) to make 10 mL, heat at 80°C for about 4 hours, and cool to about 4°C. To this solution add the mobile phase to make 25 mL. When the procedure is run with 75  $\mu$ L of this solution under the above operating conditions, the resolution between the peaks of temozolomide and the related substance IA is not less than 2.5, and the symmetry factor of the peak of temozolomide is not more than 1.9.

System repeatability: When the test is repeated 6 times with 75  $\mu$ L of the standard solution under the above operating conditions, the relative standard deviation of the peak area of temozolomide is not more than 1.0%.

**Containers and storage** Containers—Hermetic containers.

Storage—At a temperature between 2°C and 8°C.

**Others**

Related substance E:

Refer to it described in Temozolomide.

Related substance IA:

5-Amino-1H-imidazole-4-carboxamide

**Add the following to 9.41 Reagents, Test Solutions:**

**Temozolomide** C<sub>6</sub>H<sub>6</sub>N<sub>6</sub>O<sub>2</sub> [Same as the namesake monograph]

**Add the following to 9.01 Reference Standards (1):**

**Temozolomide RS**
